

Aum Enzymes
India's #1 Speciality Enzyme Products

DEEPZYME GO **Fungal Glucose Oxidase**

BENEFITS

Bromate replacer
Increase crumb structure
Soft and velvety feel
Increase Freshness
Strengthen gluten in dough system
Ecofriendly and biodegradable

DESCRIPTION

Deepzyme GO is fungal glucose oxidase enzyme preparation produced by a selected strain of *Aspergillus Species*. The enzymes will cause oxidation of glucose results in the formation of gluconic acid and hydrogen peroxide. The formed hydrogen peroxide is capable of oxidizing free sulphhydryl groups in gluten protein, thereby forming disulphide linkages and used to strengthen gluten in dough systems in baking industry

Deepzyme GO gives improvement in the quality of the baked goods, giving better crumb structure, larger volume and more freshness, and has soft and velvety feel, both to the touch & consumption.

Deepzyme GO is suitable for use as general improver, or may be used to eliminate bromate from the ingredients list. Deepzyme GO also contains some amount of catalase as side enzymes.

The product colour may vary from batch to batch and the colour intensity does not indicate the product strength [Enzyme activity].

PRODUCT SPECIFICATION

Parameters	Operational range	Optimal range
Temperature	35°C to 65°C	40°C to 60°C
pH	4.0 to 7.0	4.5 to 6.5
Form & appearance	Free flowing Powder , Light yellow color	
Enzyme Type	Fungal Glucose oxidase	
Microbial source	<i>Aspergillus spp.</i>	

PAKAGING:

Enzymes products are available in 25 Kilogram HDPE fiber drum for powder products. Special packaging is also available on request.

SAFETY

The product is produced under hygienic condition and is subject to stringent quality control.

Toxicology

The product produced by GRAS microorganism and is classified as non toxic.

Biodegradability

Product is Biodegradable.

Handling precaution

Enzymes are proteins and inhalation of dust or aerosols may induce sensitization and may cause allergic reactions in sensitized individuals. Some enzymes may irritate the skin, eyes and mucous membranes upon prolonged contact.

Liquid enzyme products may create inhalable aerosols if splashed or vigorously stirred. Spilled product material should therefore be flushed away with water.

STORAGE:

Enzyme products should be stored in a cool dry place. When stored below 35°C products will maintain its declared activity for at least 24 months. The enzyme preparation should not be left in direct sunlight for extended periods. Liquid preparation should not be frozen.

REGULATORY INFORMATION:

EEC Classification

In concentration form, the liquid enzymes products are classified as "sensitizers by inhalation" under the terms of EEC directive 88/379.

TECHNICAL SERVICE:

Aum Enzymes technical service laboratory shall be pleased to provide more information covering specific applications for all products or discuss any practical problem which may occur in the industry.

Technical datasheet given with each product are only given as usage guidelines, but tests should be carried out under local conditions to fix the optimum dosage for the machine type and conditions.
